

# Assignment 2 – PHP in a real life project

---

## Purpose

- Demonstrate your ability to fill arrays from text files and then display the content.

## Due Date/Course Weight

This assignment must be submitted before **midnight on Nov 13, 2020**.

- NOTE: Late assignments will NOT be accepted.

This assignment is worth: **10% of your total course mark**

## Assessment

Please follow the Assignment 2 Assessment document for more information.

## Summary of Tasks

Listed below are the sections of the assignment which will need to be completed:

1. Download the template file (***Book\_Rep\_CRM.zip***) for Assignment 2 from 'Course Content -> Assignments -> Assignment 2' on Brightspace which contains all files required for Assignment 2.
2. Accomplish Task 1, Task 2, Task 3, Task 4, and Task 5.
3. Test your webpage on a local web browser using EasyPHP/XAMPP.
4. Deploy your code for Assignment 2 on your web hosting domain.
5. Submit the URL of your Assignment 2 on Brightspace.
6. Submit the source code of your Assignment 2 on Brightspace.

## Task 1

Download and unzip the template file (***Book\_Rep\_CRM.zip***). The provided template for Assignment 2 contains a PHP file (***BookRepCRM.php***) that includes all the necessary markup as well as two text files: [customers.txt](#) and [orders.txt](#) that contain information on customers and on customer's orders.

The provided template for Assignment 2 should be displayed as below.

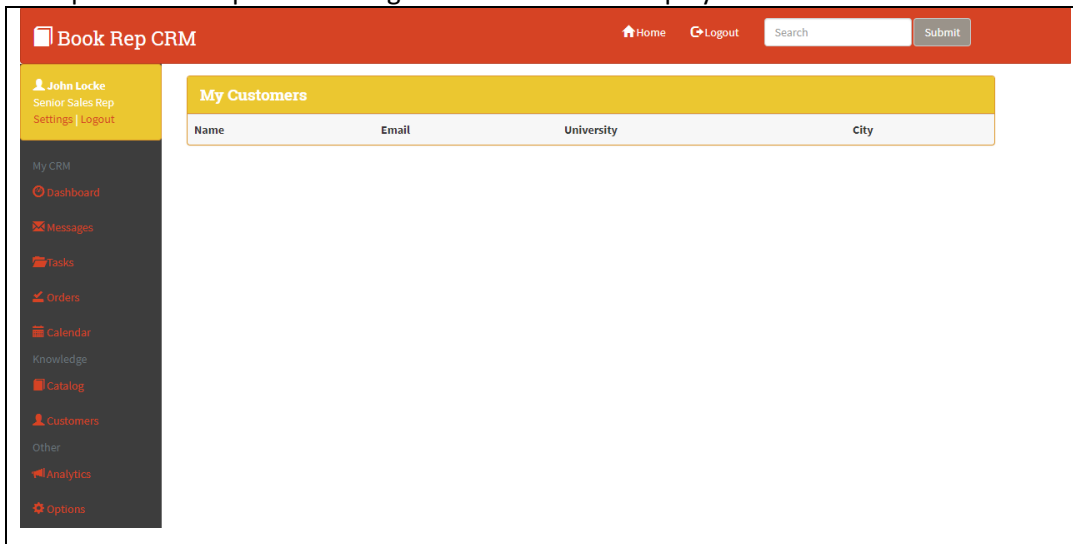

Figure 1: Provided template for Assignment 2

## Task 2

Read the data in `customers.txt` into an array, and then display the customer data in a table. Each line in the file contains the following information:

customer id, first name, last name, email, university, address, city, state, country, zip/postal, phone.

Remember that you have to display ONLY the following information:

Name (first name, last name), Email, University, City

## Task 3

Each customer name must be a link back to `BookRepCRM.php`, but with the *customer id* data as a query string (see Figure 2).

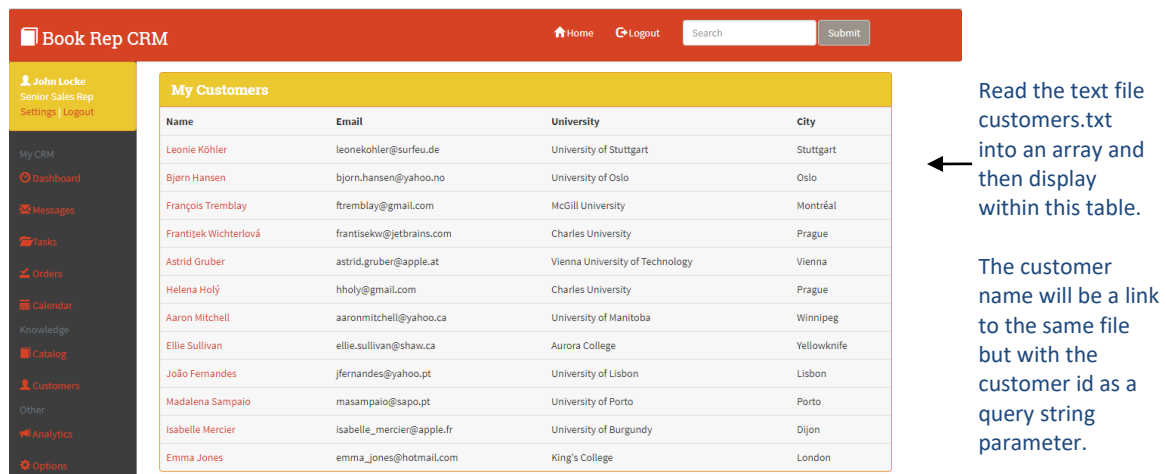

Figure 2: Expected output for Task 2 and Task 3

## Task 4

When the user clicks on the customer name (that is, makes a request to the same page but with the *customer id* passed as a query string), then read the data in `orders.txt` into an array, and then display any matching order data for that customer (see Figure 3). Each line in the orders file contains the following data:

order id, customer id, book ISBN, book title, and book category.

Remember that you have to display **ONLY** the following information:

book ISBN, book title, and book category

Be sure to display a message when there is no order information for the requested customer (see Figure 4). Also note that the customer name must be displayed in the panel heading for the orders.

The screenshot shows the Book Rep CRM interface. The top navigation bar is orange with links for Home, Logout, and a search bar. The left sidebar is dark grey with a user profile for John Locke and a list of menu items. The main content area has a yellow header for 'My Customers' and a table with columns for Name, Email, University, and City. Below this is another yellow header for 'Orders for Leonie Köhler' and a table with columns for ISBN, Title, and Category. An arrow points from the text on the right to the 'Orders for Leonie Köhler' table.

No orders for that customer

← Some customers have no orders

Figure 4: Sample output for Task 4

## Task 5

Test your website on a local web browser using EasyPHP/XAMPP. Verify that the correct orders are displayed for different customers.

## Task 6

Copy all files of Assignment 2 into 'Book\_Rep\_CRM' folder.

Upload your website for Assignment 2 into a Web Hosting Server by uploading the 'Book\_Rep\_CRM' folder inside the 'public\_html' directory of 'SiteGround' Web Hosting domain using DashBoard.

The 'File Upload' instruction is posted on Brightspace ([Course Contents -> Module 1 -> Part 2 -> SiteGround\\_FileUpload\\_Instruction.docx](#)).

## Task 7

View your website for Assignment 2 using a web browser. Open a web browser and navigate to the following web address:

**[http://your\\_web-hosting\\_domain\\_name/Book\\_Rep\\_CRM /BookRepCRM.php](http://your_web-hosting_domain_name/Book_Rep_CRM /BookRepCRM.php)**

For example, the sample URL for the homepage of Assignment 2 on an arbitrary web hosting domain is:

[rejaulc.sgedu.site/Book\\_Rep\\_CRM /BookRepCRM.php](http://rejaulc.sgedu.site/Book_Rep_CRM /BookRepCRM.php)

where '[rejaulc.sgedu.site](http://rejaulc.sgedu.site)' is the name of an arbitrary web hosting domain, '[Book\\_Rep\\_CRM](#)' is the source folder for Assignment 2, '[BookRepCRM.php](#)' is the homepage of Assignment 2.

## Task 8

Once you have confirmed that your webpage is available online, you are ready to hand in your Assignment.

Create a compressed file (**BookRepCRM.zip**) which will contain all the source files for Assignment 2.

**N.B. Please keep in mind that ONLY .zip file is accepted as the format of the compressed file.**

Create a word document (**Assignment2.doc**) in which write the following Information:

- Student Number
- First Name
- Last Name
- The URL, or hyperlink of the home page of Assignment 2

To hand in your lab go to Brightspace and navigate to Course Content → Labs and click on 'Assignment 2 – Intro to PHP' link. Upload the word document (**Assignment2.doc**) and the compressed file (**BookRepCRM.zip**) on Brightspace.

Finally, click the 'Submit' button to send the lab to your professor.

### **IMPORTANT NOTE:**

If the URL, or hyperlink, does not direct the professor to the Assignment you will receive a ZERO for the lab assignment.

### **IMPORTANT NOTE:**

If you do not upload either BookRepCRM.zip or Assignment2.doc on Brightspace, you will receive a ZERO for the assignment.
